Move to 2GP
You can now fully transition your package development from first-generation to second-generation managed packaging (2GP). By using 2GP, you'll be using the latest technology and the only packaging technology that Salesforce is investing in. Visit Salesforce Developers to learn more about moving to 2GP.

Installed Packages

Installed Packages

Help for this Page

On AppExchange you can browse, test drive, download, and install pre-built apps and components right into your salesforce.com environment. Learn More about Installing Packages.

Apps and components are installed in packages. Any custom apps, tabs, and custom objects are initially marked as "In Development" and are not deployed to your users. This allows you to test and customize before deploying. You can deploy the components individually using the other features in setup or as a group by clicking Deploy.

Depending on the links next to an installed package, you can take different actions from this page.

To remove a package, click **Uninstall**. To manage your package licenses, click **Manage Licenses**.
